

“STRIA”

SELF ADHESIVE VAPOUR DIFFUSION LAYER

Features and Benefits

- Self-adhesive
- Can be sealed with hot air gun
- Vapour barrier on wooden decks
- First layer on PIR insulation
- First layer on existing “worn out” membranes

With our ever expanding swisspor product range we introduce the “STRIA”. It is a multi-purpose auto-adhesive SBS modified bitumen membrane with a polyester composite reinforcement. The lower face is a self-adhesive vapour diffusion layer whilst the upper face is finished with a polypropylene fleece which can be easily torched on. The membrane is generally used as a vapour barrier onto OSB boards or first layer on PIR insulation (replacing the time consuming two layer system of perforated and underlay). The membrane can also be used as a first layer over exhausted membranes in renovations.

Roll sizes: 10m x 1.1m
